Day 3Lab Assignments

Task Structure:

- **Use your existing** "EventRegistration" **folder from Day 2**
  - **Inside the** resources/ **subfolder, create a new folder named** css/
  - **Inside** css/ **folder, create:**
  - styles.css (main stylesheet)
  - reset.css (browser reset stylesheet)

Design Requirements:

Color Scheme:

Use these colors throughout your website:

- **Primary Color:** #2C3E50 (Dark Blue-Gray)
- **Secondary Color:** #E74C3C (Red)
- **Accent Color:** #3498DB (Light Blue)
- **Light Background:** #ECF0F1 (Light Gray)
- **Dark Background:** #34495E (Darker Blue-Gray)
- **White:** #FFFFFF

Overall Design Concept:

- **Professional & Modern:** Clean layouts with clear visual hierarchy
- **Corporate Feel:** Suitable for a technology conference
- **Interactive Elements by pseudo classes:** Smooth hover effects

Part 1: CSS Reset (reset.css)

Create a browser reset file that removes default browser styling.

Required Elements to Reset:

- All margins and paddings
- Box-sizing for all elements
- List styles
- Link underlines and colors
- Form element fonts

Day 3Lab Assignments

Part 2: Global Styles (styles.css)

CSS Variables:
Define all colors as CSS variables in :root
Body Styling:

- Professional sans-serif font
- Comfortable line-height for readability
- Light background color
- Appropriate base font-size

- Typography Hierarchy: (Style all headings (h1 through h3) with):

- Different sizes showing clear hierarchy
- Appropriate spacing
- Primary color scheme
- Bold weights where appropriate

Part 3: Header & Navigation

Header:

- Gradient background using primary and dark colors
- Sticky positioning (stays at top when scrolling)
- Appropriate z-index
- Shadow for depth

Navigation:

- Horizontal menu layout
- White text on dark background
- Uppercase transformation
- Letter spacing for elegance
- Smooth hover effects with color changes
- Transform effects on hover

Apply appropriate selectors: child selectors, pseudo-classes, etc.

Day 3Lab Assignments

Part 4: Page Styling Requirements

Home Page (index.html):

- **Main section:** Centered with max-width, white background, shadow
- **Time elements:** Accent color, block display
- **Highlights list:** Alternating backgrounds using nth-child
- **Article section:** White card with shadow, use ::before for decoration
- **Aside (ticket prices):** Float right, accent color background, appropriate width
- **Figure & images:** Responsive sizing, rounded corners, styled captions
- **Register button:** Large, prominent, secondary color, hover effects

Schedule Page (schedule.html):

- **Day articles:** Card-style with left border accent
- **Sections:** Clean separation with borders
- **Time badges:** Inline-block, rounded, accent background
- **Session titles:** Decorative elements using ::before or ::after
- **Speaker names:** Secondary color emphasis
- **Download aside:** Styled call-to-action box

Speakers Page (speakers.html):

- **Layout:** Multi-column display using inline-block or other techniques
- **Speaker cards:** White background, shadow, hover lift effect
- **Photos:** Circular images (border-radius: 50%)
- **Names & titles:** Clear hierarchy with appropriate colors
- **Horizontal rules:** Styled dividers between sections
- **Call-to-action aside:** Eye-catching background

Registration Page (registration.html):

- **Form container:** Centered, white background, shadow
- **Fieldsets:** Visible borders, light background
- **Legends:** Colored background, white text
- **Labels:** Clear, bold
- **Input fields:** Consistent styling using attribute selectors
- **Focus states:** Clear visual feedback using :focus
- **Radio/Checkbox labels:** Enhanced styling using adjacent sibling selectors
- **Buttons:** Different colors for submit/reset/save, hover and active states

Day 3Lab Assignments

Success Page (success.html):

- **Main article:** Centered, prominent
- **Success message:** Large, secondary color
- **Confirmation box:** Light background with accent border
- **Action links:** Styled as buttons with hover effects

Terms Page (terms.html):

- **Sections:** Alternating backgrounds using nth-child
- **Headers:** Underlined with accent color
- **Lists:** Styled with appropriate spacing
- **Back link:** Button-style with hover effect

Part 5: Footer

Design a footer with:

- Dark background
- White text
- Centered content
- Styled links with hover effects
- Circular social media icons with transform effects

Notes: Required CSS Techniques (Must Use All):

Selectors You Must Demonstrate:

- Universal selector (*)
- Element selectors
- Class selectors
- ID selectors
- Descendant selectors
- Child selectors (>)
- Adjacent sibling selector (+)
- Attribute selectors [type="text"]
- Pseudo-classes: :hover, :focus, :active, :nth-child(), :last-child
- Pseudo-elements: ::before, ::after, ::first-letter

Day 3Lab Assignments

2- Do the following CSS style for the given HTML page (run the page and see the result after each point):

1- Make External CSS file for that:
   a. Make the font type "Lucida Calligraphy" for any p or div or span tag (use one CSS rule).
   b. <h1> tag which is child from div tag to be in the center of the page.
2- Make inline style for the div with "header" id, that make its width=100%, and its background color red.
3- Make inline style for the span which its id is "linksbar" , that make its width=25%, its background color gray, and make it starts from the left of the page (float property).
4- Make inline style for the span which its id is "content", that make its width=75%, its back color pink, and make it comes to the left side after the previous span (float property).
5- Make internal style that:
   a. Make a class name "none-bullet-list" that can be applied on <ul> tags, and makes list style type of the <ul> without bullets (none), and apply this class on the <ul> tag that contains the links (apply it to the <ul> tag in html directly, the selector will be class name only).
   b. Make color red, and background color pink for the links that're direct child for <li> tag, which inside span with id= "linksbar", and make it appear without underline (text-decoration property).
   c. Make color pink, and background color red for the links that're direct child for <li> tag, which (inside span with id= "linksbar", when mouse is over it.
   d. Make the font weight bold, and font size 12px, for the paragraph that comes directly after (sibling) <h2> tag which is direct child for with id="content".
   e. Make a dashed border, with size 2, and color rgb(20,70,60), for the div with id " loginform".
   f. Make style that makes the background color yellow of the any <input> of type "text", and another style that makes its background color white when it's focused.

Day 3Lab Assignments

g. Make a class named "tabled-bordered" that can be applied on any tag, and make it displayed as table cells (use display property), its padding 5, and make a border for it. Apply the class to the 3 <p> tags that are in the "titles" div (apply them on the p tags that are in "titles" div in html file, the selector will be class name only).
    i. Try to change the <p> tags inside the div with id "titles" to spans, is there any difference?
h. Use ::after pseudo element, to add this text “Read this” with color yellow” after the paragraph that is nested from span.

6- Make 2 internal styles as the following (With the same order):
    a. Color yellow for the <p> with id "aboutus" that's direct child from span with id "content".
    b. Color red for the <p> with id "aboutus".

Which style will be applied to the paragraph? And why?

7- Use !important with the second style of the previous 2 styles. What's the change that happened and why?

<u>The page should be like that after you apply the previous styles:</u>
